

### **Abstract**

A plasma display panel driving method for reducing power  
5 consumption in a case of simultaneously performing a  
selective writing and a selective erasing within one frame  
interval is disclosed. In the method, one frame includes a  
plurality of selective writing sub-fields and a plurality  
of selective erasing sub-fields. An erasing data pulse is  
10 applied only in an address period of any one of the  
plurality of selective erasing sub-fields so as to turn  
off a discharge cell.
